

ASEA REDOX Defined.

"Redox signaling molecules are so important to life that without them, a person would be dead within seconds. Leading medical research groups are dedicating huge sums of money to the study of these tiny molecules because it is believed that redox imbalance plays a role in diseases from cancer to diabetes. Redox signaling molecules are a cornerstone to disease prevention."

Simply Defined.

Redox signaling molecules (RSM) are the communication centers inside your cells. These molecules are responsible for sending powerful messages that help rejuvenate, restore, and protect cells. Redox molecules signal when something is going wrong or needs to be changed, and then the body fixes the problem. You are the sum total of your 75 trillion cells and if your cells are healthy, then you are healthy.

Why do I need to Supplement with ASEA Redox (ASEA Water)?

As we age and as we are exposed to outside toxins, stress, and health challenges and our ability to create these vital to life Redox signaling molecules diminishes.

ASEA REDOX Cell Signaling Supplement, also known as "ASEA Water", is the **only** supplement on the market proven to contain active redox signaling molecules in a shelf-stable, human consumable form. It has been certified by a third-party independent lab to contain redox signaling molecules. ASEA's patented process reorganizes natural salt molecules and purified water into redox signaling molecules.

ASEA Water has been proven to:

- ➔ Help support a healthy inflammatory response.
- ➔ Improve the immune system health.
- ➔ Improve production of digestive enzymes and improve overall gut health.
- ➔ Help maintain arterial elasticity and support cardiovascular health.
- ➔ Regulate hormone balance, which supports wellness and vitality.

ASEA water works at the genetic level. It can help gene expression throughout the body and keep cells working at optimum levels. Four ounces of ASEA water a day can keep your cells communicating and regulate genes.

It is safe for people of all ages and safe for athletes who undergo regular drug testing. ASEA reviews and thoroughly tests all of their products and has spent over \$5 million to make sure their supplements are safe.
